

BeyondPerformance

Browser Solutions for Infor Lawson

Overview

Why limit yourself to business applications that only run on Internet Explorer. Today's business needs require mobile access for tablets and phones. BYOD (Bring Your Own Device) is demanding more flexibility to support multiple browsers. iTK's Browser Solutions is an Infor Lawson add-on solution that addresses these challenges. Our robust solution can translate the output of any Infor Lawson HTML application interface such as portal, self service or standard forms and convert to native HTML that works on any browser.

Wherever you go, your Lawson data goes with you...

MOBILE ACCESS

Full mobile access from all Infor Lawson S3 Portal and SS applications.

ALL BROWSERS

Support for all browsers, including native support for Safari on iOS devices.

NATIVE HTML

iTK Technologies generates native HTML on-demand eliminating custom app downloads.
